Colour chart

25 colours common to the whole Line

The 25 colours are common to Limewash, Limepaint, Limedolomite, Limestucco and Limetech. Each product's expression changes how the colour is perceived: the same tone does not read the same in a limewash as in a stucco.

ARENA

The RGB and HEX values are a digital reference, not a colour sample.

Neither a screen nor a print reproduces the colour of a mineral lime coating. The final colour depends on the product, the number of coats, the absorbency of the substrate and the light in the space, and lime varies naturally between applications. Request a physical sample before specifying.
